CHAPTER V

The cure of the disease, and its symptoms

If proper precautions were taken for the prevention of this disease, and the rules which have been laid down for that purpose were complied with, we should seldom have occasion to meet with it in a high degree either at sea or land. It is indeed difficult to persuade some to practise, when in health, what is necessary to preserve so valuable a blessing. All mankind have not the benefit of a pure wholesome air, warm dry lodgings, with proper conveniencies to guard against the inclemency of different weather and seasons. Many are also of necessity obliged to live upon such gross food as is not properly adapted to their digestive powers, to their constitution, and the exercise they use, so that from thence they may be apt to contract this evil. It is proper therefore to prescribe the euro for it, as well as the prevention.

Indeed the general method of it, and the best remedies, have already been taken notice of in the former chapter. Experience shews, that the cure of the adventitious scurvy is very simple, viz. a pure dry air, with the vise of green herbage or wholesome vegetables, almost of any sort; which for the most part prove effectual.

Hence the first step to be taken towards its removal, when contracted either at sea or land, is change of air. We are upon this occasion informed by several authors,
A TREATISE OF THE SCURVY

IN THREE PARTS

Containing an inquiry into the Nature, Causes, and Cure, of that Disease together with a Critical and Chronological View of what has been published on the subject

CONTENTS

EDITORS' FOREWORD

A TREATISE OF THE SCURVY BY
JAMES LIND, M.D.

Preface

PART I

I. A critical history of the different accounts of this disease
   11

II. Of its several divisions, viz. into scurvies cold and hot, acid and alcaline, &c.
   38

III. Of the distinction commonly made into a land and sea scurvy
   52

IV. Of the scurvy being connate, hereditary, and infectious
   64

PART II

I. The true causes of the disease, from observations made upon it, both at sea and land
   69

II. The diagnostics, or signs
   113

III. The prognostics
   133

IV. The prophylaxis, or means of preventing this disease, especially at sea
   137

V. The cure of the disease, and its symptoms
   178

VI. The theory
   201

VII. Dissections
   227

VIII. The nature of the symptoms, explained and deduced from the foregoing theory and dissections
   232
