body may be so overcome by it, that the digestive faculties (as in a person starving with cold) are chilled and enervated; and the solids being overbraced by so high a degree of cold, may at last lose their tone or elasticity. In this case, the constitution becoming gradually habituated to an overcharge of what physicians call the *serosa colluvies*, by a long obstructed perspiration; instead of coughs, stitches, pleurisies, and the like disorders of the inflammatory kind, usual in such seasons from too tense fibres, the scorbutic diathesis may more naturally be contracted, especially if such food only is used as must contribute to form the disease. But this, though probable, cannot be ascertained from fact; because, as I observed elsewhere,¹ these northern countries, above all others, are continually pestered with fogs, even during their severest frosts. And by all faithful and accurate observations made on this disease, moisture is experienced to be the principal and main predisposing cause to it. This indeed of itself is sufficient to dispose the constitution to the scurvy in any climate, even the warmest. It is observable, that, in warm climates, the crews of ships at sea are liable to this malady, when the hot weather, by which the fibres of the body are much relaxed, is succeeded by great and incessant rains usual in these latitudes, or when the season proves very unconstant. The disease is there likewise much owing to the great length of these southern voyages. But, otherwise, it is not near so frequent a calamity as in colder climates; the bad effects of moisture being rendered much more pernicious when combined with cold. A cold and moist constitution of the atmosphere, together with wet lodgings, damp beds, cloaths, and other incon-

EDITORS' FOREWORD                                      PAGE

A TREATISE OF THE SCURVY BY
JAMES LIND, M.D.

Preface                                                  5

PART I

I. A critical history of the different accounts of this disease 11
II. Of its several divisions, viz. into scurvies cold and hot, acid and alcaline, &c. 38
III. Of the distinction commonly made into a land and sea scurvy 52
IV. Of the scurvy being connate, hereditary, and infectious 64

PART II

I. The true causes of the disease, from observations made upon it, both at sea and land 69
II. The diagnostics, or signs 113
III. The prognostics 133
IV. The prophylaxis, or means of preventing this disease, especially at sea 137
V. The cure of the disease, and its symptoms 178
VI. The theory 201
VII. Dissections 227
VIII. The nature of the symptoms, explained and deduced from the foregoing theory and dissections 232

**ADDITIONAL NOTES—BIOGRAPHICAL AND TECHNICAL**

| I. The Third Edition of the *Treatise* | 361 |
| By C. P. Stewart, PH.D., D.SC., Reader in Clinical Chemistry, University of Edinburgh |
| II. The Lind Tradition in the Royal Naval Medical Service | 369 |
| By Surgeon Vice-Admiral Sir Sheldon F. Dudley, K.C.B., M.D., F.R.C.P., F.R.C.S.E., F.R.S., Medical Director-General of the Royal Navy, 1941-5 |
| III. James Lind and Some of His Contemporaries | 387 |
| By Douglas Guthrie, M.D., F.R.C.S.E., Lecturer in History of Medicine, University of Edinburgh, and A. P. Meiklejohn, M.A., B.Sc., D.M., M.R.C.P., Senior Lecturer in Nutrition, University of Edinburgh |
| IV. Scurvy in the Nineteenth Century and After | 404 |
| By C. P. Stewart |
| V. The Chemistry of Vitamin-C | 413 |
| By E. L. Hirst, M.A., D.Sc., LL.D., F.R.S., Professor of Organic Chemistry, University of Edinburgh |
| VI. The Role of Ascorbic Acid in the Human Body | 425 |
| By A. P. Meiklejohn, C. P. Stewart, and R. Passmore, M.A., D.M., Senior Lecturer in Physiology, University of Edinburgh |
ILLUSTRATIONS

JAMES LIND, M.D.  

From an engraving by I. Wright from a painting by Sir George Chalmers, Bart. (1783). The engraving forms the Frontispiece to the copy of Lind's *Essay on Diseases incidental to Europeans in Hot Climates* in the library of Haslar Hospital. The signature is from Lind's letter to Sir Alexander Dick.
