Linnustonseuranta

Julkaisija: Päivi Sirkki [?] · 31. lokakuuta kello 10:47 · 🌐

Talvilintulaskennat alkavat keskiviikkona 1.11. syyslaskentajaksolla! Tulevien parin viikon aikana sadat uutterat laskijat kiertävät vuodesta toiseen samoina pysyvät laskentareittinsä. Kun kaikki havaitut linnut lasketaan, saadaan hyvä käsitys lajien runsauksien vaihtelusta. Syyslaskenta paljastaa muun muassa kuinka paljon muuttolintuja on jäänyt viivyttämään ja kuinka paljon marjoille persoja tilhiä ja rastaita on eri puolilla maata. Talvilintulaskenta on hauska tapa harrastaa lintuja muuten hiljaisena vuodenaikana ja osallistua samalla arvokkaaseen seurantaan. Lisätietoja talvilintulaskennoista: <https://www.luomus.fi/fi/talvilintulaskennat>

# Red listing of Finnish birds

# IUCN criteria (vol. 3.1)

- Species listed in categories:
  - i) Extinct (EX)
  - ii) Extinct in the wild (EW)
  - iii) Critically endangered (CR)
  - iv) Endangered (EN)
  - v) Vulnerable (VU)
  - vi) Nearly threatened (NT)
  - vii) Least concern (LC)
  - viii) Data deficient (DD) (no data)
  - ix) Not evaluated (NE) (non-native)

# IUCN criteria (vol. 3.1)

- Species listed in categories:
  - i) Extinct (EX)
  - ii) Extinct in the wild (EW)
  - iii) Critically endangered (CR)
  - iv) Endangered (EN)
  - v) Vulnerable (VU)
  - vi) Nearly threatened (NT)
  - vii) Least concern (LC)
  - viii) Data deficient (DD) (no data)
  - ix) Not evaluated (NE) (non-native)

# IUCN criteria (vol. 3.1)

- Species listed in categories:
  - i) Extinct (EX)**
  - ii) Extinct in the wild (EW)**
  - iii) Critically endangered (CR)**
  - iv) Endangered (EN)**
  - v) Vulnerable (VU)**
  - vi) Nearly threatened (NT)**
  - vii) Least concern (LC)
  - viii) Data deficient (DD) (no data)
  - ix) Not evaluated (NE) (non-native)

# IUCN criteria (vol. 3.1)

- Five main criteria:
  - A) Decline in population size
  - B) Small geographical range and fragmented or declining population
  - C) Small population size and decline
  - D) Very small population size
  - E) Quantitative analysis showing probability of extinction

<http://www.iucnredlist.org/technical-documents/categories-and-criteria>

# IUCN criteria (vol. 3.1)

- Five main criteria:

**A) Decline in population size**

B) Small geographical range and fragmented or declining population

C) Small population size and decline

**D) Very small population size**

E) Quantitative analysis showing probability of extinction

<http://www.iucnredlist.org/technical-documents/categories-and-criteria>

# A. Decline in population size

- An observed, estimated, inferred or suspected population size reduction of
  - i)  $\geq 80\%$  in CR,
  - ii)  $\geq 50\%$  in EN,
  - iii)  $\geq 30\%$  in VU over the last 10 years or three generations, where the reduction or its causes may not have ceased OR may not be understood OR may not be reversible

# A. Decline in population size

- An observed, estimated, inferred or suspected population size reduction of
  - i)  $\geq 80\%$  in CR,
  - ii)  $\geq 50\%$  in EN,
  - iii)  $\geq 30\%$  in VU over **the last 10 years or three generations**, where the reduction or its causes may not have ceased OR may not be understood OR may not be reversible

# A. Decline in population size

- An observed, estimated, inferred or suspected population size reduction of
  - i)  $\geq 80\%$  in CR,
  - ii)  $\geq 50\%$  in EN,
  - iii)  $\geq 30\%$  in VU over the last 10 years or three generations, **where the reduction or its causes may not have ceased OR may not be understood OR may not be reversible**

# A. Decline in population size

- based on (and specifying) any of the following:
  - (a) direct observation
  - (b) an index of abundance appropriate to the taxon
  - (c) a decline in area of occupancy, extent of occurrence and/or quality of habitat
  - (d) actual or potential levels of exploitation
  - (e) the effects of introduced

# A. Decline in population size

- based on (and specifying) any of the following:
  - (a) direct observation**
  - (b) an index of abundance appropriate to the taxon**
  - (c) a decline in area of occupancy, extent of occurrence and/or quality of habitat**
  - (d) actual or potential levels of exploitation
  - (e) the effects of introduced

# A. Decline in population size

## Examples

### Ortolan bunting:

Generation length 3.6  
years \* 3 = 11 years,  
e.g. 2006-2017

Decline in breeding  
counts -80%

=>

≥80% in CR  
≥50% in EN  
≥30% in VU

# A. Decline in population size

## Examples

### Ortolan bunting:

Generation length 3.6  
years \* 3 = 11 years,  
e.g. 2006-2017

Decline in breeding  
counts -80%

=> CR

≥80% in CR  
≥50% in EN  
≥30% in VU

# A. Decline in population size

## Examples

**Curlew:** Generation length 10.4 years\*3 = 31 years, e.g. 1986-2017

Decline in breeding counts -22%

=>

≥80% in CR  
≥50% in EN  
≥30% in VU

# A. Decline in population size

## Examples

**Curlew:** Generation length 10.4 years\*3 = 31 years, e.g. 1986-2017

Decline in breeding counts -22%

=> NT

≥80% in CR  
≥50% in EN  
≥30% in VU

# A. Decline in population size

## Examples

**Willow tit:** Generation length 4.6 years \* 3 = 14 years, e.g. 2003-2017

Decline in breeding counts -53%, winter counts -68%

=>

≥80% in CR  
≥50% in EN  
≥30% in VU

# A. Decline in population size

## Examples

**Willow tit:** Generation length 4.6 years \* 3 = 14 years, e.g. 2003-2017

Decline in breeding counts -53%, winter counts -68%

=> EN

≥80% in CR  
≥50% in EN  
≥30% in VU

## B. Geographic range

1. Extent of occurrence estimated to be less than 1000 km<sup>2</sup> (CR), 5,000 km<sup>2</sup> (EN), 20,000 km<sup>2</sup> (VU), and estimates indicating at least two of a-c:
  - a. Severely fragmented or known to exist at no more than five locations.
  - b. Continuing decline, observed, inferred or projected,
  - c. Extreme fluctuations
  
2. Area of occupancy estimated to be less than 10 km<sup>2</sup> (CR), 500 km<sup>2</sup> (EN), 2000 km<sup>2</sup> (VU) and estimates indicating at least two of a-c:
  - a. Severely fragmented or known to exist at no more than five locations.
  - b. Continuing decline, observed, inferred or projected
  - c. Extreme fluctuations

## B. Geographic range

1. **Extent of occurrence** estimated to be less than 1000 km<sup>2</sup> (CR), 5,000 km<sup>2</sup> (EN), 20,000 km<sup>2</sup> (VU), and estimates indicating at least two of a-c:
  - a. Severely fragmented or known to exist at no more than five locations.
  - b. Continuing decline, observed, inferred or projected,
  - c. Extreme fluctuations
  
2. **Area of occupancy** estimated to be less than 10 km<sup>2</sup> (CR), 500 km<sup>2</sup> (EN), 2000 km<sup>2</sup> (VU) and estimates indicating at least two of a-c:
  - a. Severely fragmented or known to exist at no more than five locations.
  - b. Continuing decline, observed, inferred or projected
  - c. Extreme fluctuations

# B. Geographic range

**Figure 2.** Two examples of the distinction between extent of occurrence and area of occupancy. (A) is the spatial distribution of known, inferred or projected sites of present occurrence. (B) shows one possible boundary to the extent of occurrence, which is the measured area within this boundary. (C) shows one measure of area of occupancy which can be achieved by the sum of the occupied grid squares.

# C. Population size and decline

- C. Population size estimated to number fewer than 250 (CR), 2500 (EN) or 10000 (VU) mature individuals and either:
  1. An estimated continuing decline
    - i) 25% in 3 years/1 generation (CR)
    - ii) 20% in 5 years/2 generations (EN)
    - iii) 10 % within certain 10 years/ 3 generations (VU)
  - OR
  2. A continuing decline, observed, projected, or inferred, in numbers of mature individuals AND at least one of the following (a-b):
    - a. Population structure in the form of one of the following: (i) no subpopulation estimated to contain more than 50 mature individuals, OR (ii) at least 90% of mature individuals in one subpopulation.
    - b. Extreme fluctuations in number of mature individuals.

## D. Small population size

- Population size estimated to number fewer than
  - i) 50 mature individuals (CR)
  - ii) 250 mature individuals (EN)
  - iii) 1000 mature individuals (VU)

## D. Small population size, **examples**

- Population size estimated to number fewer than

i) 50 mature individuals (CR)

Breeding population less than 25 pairs: very rare breeding species, which have had breeding population for some time:

Greater spotted eagle, snowy owl, black tern, turtle dove, kingfisher

## D. Small population size, **examples**

- Population size estimated to number fewer than

i) 50 mature individuals (CR)

Populations recently colonized (edge populations) are upgraded: e.g.

Citril wagtail (->EN), Savi's warbler (->EN)

## D. Small population size

- Population size estimated to number fewer than

iii) 1000 mature individuals (VU)

Relatively rare species: quail, eagles, moorhen, white-backed woodpecker, great reed warbler, barred warbler, bearded tit

## E. Quantitative analysis

- Quantitative analysis showing the probability of extinction in the wild is
  - i) at least 50% within 10 years or three generations (CR)
  - ii) at least 20% within 20 years or five generations (EN)
  - iii) at least 10% within 100 years (VU)

# Problematic species

- Uncommon species with poor monitoring data: bean goose (VU in 2019), little ringed plover (NT)
- Borderline species e.g. decline 29-31%
- Contrasting data: one shows clear decline other not.
