

## Tutustu aitoon väärennökseen

*Suomalainen geenivastustaja oli lähettänyt alla olevan väärennöksen muka Maa- ja elintarviketalouden tutkimuskeskuksen nimissä EU-komission nettisivulle (9.6.2008).*

**Organisation: MTT Agrifood Research Finland**

**City: Vihti**

**Country: Finland**

**Type: Scientific Institution**

**Public: Yes**

---

**a. Assessment:**

**b. Food Safety Assessment:**

**Toxicology**

Finland does not protect citizens from animal products produced with genetically modified crops. The freedom of food choice is guaranteed, but consumers, especially school children, do not have any choice, because public schools do not offer meals prepared from gm and gm-free raw materials separately. Additionally animal products produced with gm-crops are not labelled. Reasonable risk assessment requires at least 10-50 years (> 2 generations) observation before the impact on both animal and consumer's health is evident. The opinion of the GMO Panel is based rather on believe than on scientific research. The consumer is not concerned about the knowledge of the members of the GMO panel in respect of the applicant's crop but rather about what they do not know and therefore assume.

*Sama "omatekoinen" teksti oli monistettu sellaisenaan myös muihin kappaleisiin: Allergenicity, Nutritional assessment, Others, sekä Environmental risk assessment. Väitteet ovat lähes yhtä vinoja kuin 29.2.2008 väärennöksessä, mutta englanti on tällä kertaa parempaa, vain hiukan "germanistisesti" sävyttynyttä.*
